.; 3 The invention relates to a novel method for characterizing the state of a neoplastic disease in a subject comprising determining the pattern of expression levels of at least 6, 8,10,15, 20, 30, 47 or 67 marker genes in a biological sample, comparing the pattern of expression levels with reference patterns of expression levels and characterizing the state of the neoplastic disease in the subject from the outcome of the comparison. The method of the invention demonstrates cytostatic applications and may be useful in characterizing the state of a neoplastic disease in a subject, preferably breast cancer, in gene therapy and for screening for compounds having a curative effect on a neoplastic disease. The current sequence is that of the human breast cancer marker MARKS DNA of the Characterizing the state of a neoplastic disease in a subject by comparing the pattern of determined expression levels of marker genes a biological sample with reference patterns of expression levels. 54; Gaps invention which is differentially expressed in neoplastic tissue. DB 14; Length 1866; Sequence 1866 BP; 380 A; 605 C; 535 G; 346 T; 0 U; 0 Other; 1; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   weducing or reversing tolerance, physical dependence, hyperalgesia,
withdrawal symptoms, or pain sensitization in patients on analgesics for
chronic pain, comprises inhibition of the extracellular signal-regulated
kinase (ERK).
                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of reducing or reversing tolerance, reducing the risk of physical dependence or hyperalgesia, reducing the symptoms of opioid withdrawal or inhibiting pain sensitisation in a patient taking analgesics. The method comprises administering an analgesic and an extracellular signal-regulated kinase (BRK) inhibitor comprised in a formulation to reduce or reverse tolerance, risk of physical dependence, hyperalgesia, symptoms of opioid withdrawal, or inhibiting pain sensitisation in patients taking analgesics for chronic pain or those undergoing surgery. The present sequence represents the coding sequence of human BRKI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAGAATGTCATCGGCATCCGAGACATTCTGCGGGCGTCCACCCTGGAAGCCATGAGAGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel isolated polypeptide (1) comprising an amino acid sequence selected from sequences comprising 315 or 359 amino acids (ADW12901 or ADW12901) or its fragments. The polypeptides and polymucleotides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SMARYS gene in a mammal. The fragments of the polypeptides and polymucleotides can also be used as primers or probes. This sequence corresponds to the cDNA encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           purification; diagnosis; cancer; mitogen-activated protein kinase;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, concoded polypeptides (AAM38642-AAM42213) with nootropic, concoded polypeptides of cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous of system, such as contains and central nervous system diseases, such as a lateral sed neuropathy and clateral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activities such as: Immune system suppression, cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolyvic activity, arthritis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form to part of the printed specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAGGGGTCGGCCCGGGGTCCCGGGGAGGTCGAGAGGGGGCAGCCGTTCGAC 1686

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosas, and Shy-Drager Syndome. Other uses include the utilisation of the activities such as Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form rel nucleic acids and polypeptides, useful for treating disorders central nervous system injuries. Claim 1; SEQ ID NO 113; 10078pp; English WPI; 2001-442253/47 P-PSDB; AAM38754. Novel aB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel isolated polypeptide (I) comprising an amino acid sequence selected from sequences comprising 335 or 359 amino acids (ADW12901 or ADW12903) or its fragments. The polypeptides and polymucleotides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SWAPK3 gene in a mammal. The fragments of the polypeptides and polymucleotides can also be used as primers or probes. This sequence corresponds to the CDNA encoding the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                               The invention relates to novel isolated polypeptide (I) comprising an amino acid sequence selected from sequences comprising 335 or 359 amin acids (ADM12901) or ADM12903) or its fragments. The polypeptides and polymuclectides are useful for diagnosing diseases, e.g. cancers, associated with the deficiency of the SMAPK3 gene in a mammal. The fragments of the polypeptides and polymuclectides can also be used as primers or probes. This sequence corresponds to the cDNA encoding the SMAPK3V1 variant protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gereggeerargaccaegraccaegaeregeerggeerargaagaagareageeerreg

The invention relates to novel isolated human kinases and phosphatases (KPP) polypeptides. A protein of the invention has cytostatic, anorectic, and immunosuppressive activity, and acts as a KPP-Ahtagonist, or KPP-Agnist. A polymucleotide of the invention may have a use in gene therapy. The polypeptide is useful for preparing a composition for diagnosing or treating a disease or condition associated with decreased expression or overexpression of functional KPP e.g., autoimmune disorders, obesity or cancer. The sequences shown in ADH48392-ADH48440 represent KPP proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human kinases and phosphatases (KPP) polypeptide, useful for preparing a composition for treating a disease associated with decreased expression or overexpression of functional KPP e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Khare R;

The present invention relates to identifying and obtaining a compound useful in the prevention or treatment of cardiac diseases, comprising compartication of the activity of Raf-1, MEXI/2 and/or Erki/2 depending on the compound. The method is useful for identifying and/or obtaining compounds that may be used in the prevention or treatment of cardiac diseases, particularly congestive heart failure. The compound or protein is also used for the preparation of a pharmaceutical composition for prevention or treatment of a disease related to hypertrophy or impaired or increased activation of telethonin (T-Cap), kagr;-actinin, MEC, actin, the protein or antibody which specifically recognizes the activated/phosphorylated form of the above polypeptide, is used for the protein or actibody which specifically recognizes the activation of a composition for diagnosing a disease or a predisposition for diagnosing a disease or a predisposition for cativation of Raf-1, MEXI/2 and/or Erki/2. The present sequence
                                                                                                                                                                                                                                            Identifying and/or obtaining a compound useful for preventing or treating cardiac diseases, particularly congestive heart failure, comprises quantification of the activity of Raf-1, MEK1/2 and/or Brk1/2 depending
                                                                                                                                                                                                                                                                                                                                                        Claim 33; SEQ ID NO 7; 41pp; English

Direct Submission Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr | 18t strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecok V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Ecok V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invirced.

Five prime end enriched, double-strand cDNA was digested with Not I and cloned	into the Not I and ECOR V sites of the pCMVSPORT 6 Vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

1st strand CDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
nd enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCNVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

2 rue Gaston Cremieux, CP 5706 - 91057 EVRY cedex - FRANCE Email: segref@genoscope.cns.fr, Web : www.genoscope.cns.fr lst strand cDNA was primed with a Not1-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSFORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invirogen.
This sequence belongs to sequence cluster 8342.f

US-09-412-289-1
US-09-412-289-1
Sequence 1, Application US/09412289
Patent No. 6271210
GENERAL INFORMATION:
APPLICANT: Sivaraman, Vimala S.
APPLICANT: Manbon, Craig C.
TITLE OF INVENTION: ANTISENSE OLIGONUCLEOTIDES FOR MITOGEN-ACTIVATED TITLE OF INVENTION: PROTEIN KINASES AS THERAPY FOR CANCER
FILE REFERENCE: Seq. 1-4 (178-225 CIP II/CON)
CURRENT APPLICATION NUMBER: US/09/412,289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCGTCTAATATAAATATAGAGATGTCTCTATGGCTG 1837
